

Wireless LAN Solutions for Enterprise

Easy to Deploy & Easy to Manage Wireless LAN Solutions for Enterprise Powered by 4ipnet

“4ipnet’s enterprise Wireless LAN Solution enhances network reliability and simplifies network management, minimizing potential downtime and increases business productivity.”

4ipnet enterprise wireless LAN solution enables wireless networks to match wired connections in terms of **PERFORMANCE**, **UNINTERRUPTED APPLICATION DELIVERY** and **SECURITY**, while offering mobility and longevity that come from a wire-free network.

Common Issues of Enterprise Wi-Fi Networks

For enterprises, interruptions of network connectivity are equivalent to inefficiency and lost revenue. Problems often encountered include:

- Unreliable network operation causes lost productivity.
- Interruptions of voice and video conferences due to network congestion.
- Unable to manage and apply same Internet policies to branch networks.
- Confidential data and documents on the network need to be secure from intrusion.

4ipnet's Wireless LAN Solution for Enterprise

Our Cost-effective Solution Provides:

- High availability and 1+1 redundancy enhances the reliability of wireless networks
- Traffic prioritization ensures smooth operation of mission-critical communications
- Tunneled/Layer 3 AP management for managing and monitoring branch office networks from headquarters
- 802.1X authentication, AES data encryption, firewall rules and remote VPN provide the security necessary for preventing leakage of confidential information
- Secure Enterprise-Grade WLAN for your Enterprise Network
- Secure User Authentication
- Simple Network Security Management
- Comprehensive Event Tracking
- Access Control Using Role-based User Policies

Secure Remote Network Access and Management

Enterprise Deployment Scenario:
